D10 Trust Federal Government

People have different ideas about how much they can trust government to do what is right. These ideas don't refer to Democrats or Republicans in particular, but just to the government in general. We want to see how you feel about this for each of the levels of government.

How much of the time do you think you can trust the federal government in Washington to do what is right -- nearly always or most of the time, some of the time, seldom, or almost never?

w1 Term Limit Approval

The next few questions are about term limits.

In 1992, the voters approved an amendment to the state constitution that places limits on the number of terms in office that can be served by the governor and members of the state legislature.

Do you approve or disapprove of these term limits?

land1                      Redirect State Resources

Next, I have a few questions about land use in Michigan. Land use refers to the use of land for residential, commercial, industrial, agricultural, and recreational purposes. I would like to read you some policy proposals concerning land use and have you tell me to what extent you would support or oppose each.

The first is, state resources should be directed for redevelopment of existing commerce centers rather than for the development of undeveloped areas.

Commerce Centers are communities with larger populations that already have the infrastructure (roads, transportation systems) to support development.

propA1 Proposal A: Choose Today

Now, I have some questions about school funding. Before 1994, the operating funds for public schools in Michigan came primarily from local property taxes. As a result, per pupil spending differed greatly from one community to another.

In 1994, both Democrats and Republicans voted to change the way schools are funded and let voters choose between two different funding proposals.

Proposal A amended Michigan's constitution to greatly reduce property taxes as a source of funds for schools and placed a limit on annual increases in property value assessments. To replace the funding needed for schools, the [green]sales tax[n] was increased from 4% to 6% and all schools received the same minimum amount of funding per pupil from the state.

If Proposal A had not been passed by voters, Proposal B would have automatically gone into effect. It would have reduced property taxes but would not have limited assessment increases. It would have replaced funding for schools by increasing the [green]state income tax[n] to 6%. All schools would still have received the same minimum amount of funding per pupil.

If you had a chance to choose today, would you prefer to have school funding based primarily on local property taxes, on the state sales tax, or on the state income tax?

propA2 Proposal A: Educational Opportunities

In 1994, voters chose Proposal A, to reduce property taxes, limit assessments increases and fund public schools through an increase in the sales tax. Since then, the state gives each school district a fixed minimum level of funding for each pupil enrolled. This has increased each year so that currently the schools receive a minimum of \$6,700 per pupil from the state. Some communities can still add to this from local tax sources.

Has this approach to funding increased, reduced, or made no difference in the educational opportunities or the quality of education available for children in your community?

## Proposal A: Property Taxes

If the funding level were to be increased through property taxes, it could be accomplished either by increasing the number of mils school districts are allowed to levy, or by eliminating the limit on the amount of the annual increase in property value assessments that are allowed.
