t1 Target: High vs Random

Experts often debate how terrorists may attack the United States in the future.

Some argue that terrorists are interested in high profile targets, such as large cities or nuclear power plants, while others contend that terrorists are interested in spreading fear and chaos across the whole country, so an attack could occur randomly just about anywhere.

Which of the following is closest to your point of view?

Terrorists are only interested in high profile targets, terrorists are mostly interested in high profile targets, terrorists are mostly interested in random attacks, or terrorists are only interested in random attacks.

Importance Public Awareness Safe Delivery Law

The Safe Delivery of Newborns law was enacted January 1, 2001, in response to an increase in the number of newborn infants abandoned in unsafe places.

The law targets troubled parents and encourages the placement of a newborn no more than 72 hours old with an employee of a fire department, police station, or hospital, who is inside and on duty. The law allows that the surrender be anonymous, but encourages the parent to share relevant background information which will be kept confidential. The surrendered infant will be placed with an approved adoptive family.

In your opinion, how important is it to ensure that there is public awareness of this law?

Would you say it is very important, somewhat important, not very important, or not important at all?
